

## How safe are crossings that do not have guardrailings?

Anyone can take part. Help us get results from a broad spectrum of locations all across the country.

Find a crossing or junction where people cross, which does **NOT** have any guardrailings.

Please record the following:

1. Width of road (m) and the number of lanes, before you reach the other side or a central refuge
2. Amount of traffic by counting the number of cars and busses in a typical busy ten minutes
3. Number of people who cross the road in a typical busy ten minutes

Of the people crossing record:

4. The number who walk across and keep strictly to the crossing itself  
**and**
5. The number who cross near but not actually on the crossing

For example:

These people are walking across and keeping strictly to the crossing.  
The count would go towards 4.

Crossing near the crossing but not actually on it, so the count would go towards 5.

Send you results to: [publicrealmPRIAN@aol.com](mailto:publicrealmPRIAN@aol.com)

Use our handy chart and join in the count.  
Help national research include your local crossings

**Road Name** \_\_\_\_\_

**Town** \_\_\_\_\_

**The Crossing**

1	Road width (aprox mts)	
	Number of Lanes	

**Amount of Traffic in a typical 10 mins**

2	Buses & cars	
3*	All people who cross	
4	People - strictly to the crossing	
5	People - near but not on the crossing	

\*it can be easier to simply add 4 & 5 to get the results for 3 at the end of the count.
